

## Mention Change of the Type of Emissions

### DSP Research, Inc. certified **WiMAX** devices

While DSP Research, Inc. deals with a lot of wireless equipment's certifications for using OFDM modulation, we certified a type of emissions for WiMAX devices as "X7W" for the following reasons: there is "X7W" in the *Radio Law Related Examination Criteria*. And a type of emissions for local WiMAX is "X7W".

However, we will unify the type of emissions for WiMAX devices as "X1C, X1D, X1F, X7W" hereafter by coordinating with Ministry of Internal Affairs and Communications (MIC) and UQ communications, Inc. in order to avoid confusion between UQ communications, Inc. who is given the blanket license uses "X1C, X1D, X1F" for type of emissions and us. Also, this alternation will apply for local only WiMAX certifications as well.

We will reissue the certificates as "X1C, X1D, X1F, X7W" for the WiMAX equipments had already obtained the certificates from us while MIC will change the information on their database and revise records of the official gazette. In addition, for the applicants (certificate holders), please replace from an old certificates to new certificates which we will start to mail as of February 24, 2009. The certification number and the date of the certification you now have will not be changed by this alternation. **At last, there is no charge for this alternation.**

**OLD : X7W**

**NEW: X1C, X1D, X1F, X7W**
